

Cloud9 IDE Builds Online Development Environment with Red Hat OpenShift

JAN 30, 2013

Integrating Red Hat's Platform-as-a-Service (PaaS), Cloud9 offers an IDE with runtime-enabled workspaces

RALEIGH, N.C.--(BUSINESS WIRE)-- Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced that Cloud9 IDE has built its online development environment with Red Hat's OpenShift Online hosted Platform-as-a-Service (PaaS) solution. By integrating OpenShift Online into its original online development environment, Cloud9 IDE is able to deliver more flexibility, security and ease of use to developers.

Cloud9 IDE is an online development environment for Javascript and Node.js applications as well as HTML, CSS, PHP, Java, Ruby and 23 other languages. It is designed for developers looking for a modern and secure IDE that strives to work efficiently by having their code accessible online from anywhere via Cloud9 IDE workspaces. Launched in March 2011, Cloud9 IDE quickly took steps to expand the functionality it initially offered developers with its online environment, hoping to offer a user workflow with the ability to develop and deploy runtime code from the same online platform on which it had been developed. Cloud9 IDE hoped to give developers a more robust offering, combining editing tools and the runtime environment into a single platform, all within the cloud.

Looking to collaborate with another leading vendor to enhance its platform, Cloud9 IDE selected Red Hat for its OpenShift Online offering. One of the many reasons it selected OpenShift Online was for the inherent security provided through the PaaS solution's inclusion of Red Hat Enterprise Linux. Today, by leveraging OpenShift Online containers, Cloud9 IDE workspaces provide developers with a single online place to store, run and configure their files, all while offering a full terminal and full shell access into the container. While inside a workspace, a user can access Cloud9 IDE and complete the same functions that can be done on a desktop or laptop machine. In addition to security, the switch to OpenShift Online provides a cost-efficiency benefit as it offers a multi-tenant model where multiple workspaces run on the same virtual machine.

The combination of Cloud9 IDE and OpenShift Online also allows users to run executables, including binary models, Node.js support, Ruby, PHP and C++ applications. This flexibility has allowed many to benefit from using Cloud9 IDE in their infrastructure, including startups, independent software vendors and freelance developers. Working with a variety of users has allowed Cloud9 IDE to explore the next phase of offerings within a private cloud.

Supporting Quotes

Ruben Daniels, CEO and founder, Cloud9 IDE

"Once we really understood what OpenShift was capable of from a technical point of view, we realized we could integrate it to support a better workflow for our users to easily build apps. The combination of Red Hat's leadership in PaaS and our capabilities at Cloud9 IDE offer developers an easy, flexible and efficient way to build and deploy applications. Our platform wouldn't be where it is today without OpenShift Online."

Ashesh Badani, general manager, Cloud Business Unit and OpenShift, Red Hat

"We are excited to collaborate with Cloud9 IDE so more users and developers can experience the full range of programming languages and runtime ecosystems OpenShift has to offer, along with the inherent flexibility and ease of use of the platform. We look forward to continuing to enable more developers to easily utilize PaaS platforms like OpenShift Online for their applications."

About Red Hat, Inc.

Red Hat is the world's leading provider of open source software solutions, using a community-powered approach to reliable and high-performing cloud, Linux, middleware, storage and virtualization technologies. Red Hat also offers award-winning support, training, and consulting services. As the connective hub in a global network of enterprises, partners, and open source communities, Red Hat helps

create relevant, innovative technologies that liberate resources for growth and prepare customers for the future of IT. Learn more at <http://www.redhat.com>.

Forward-Looking Statements

Certain statements contained in this press release may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: risks related to delays or reductions in information technology spending; the effects of industry consolidation; the ability of the Company to compete effectively; uncertainty and adverse results in litigation and related settlements; the integration of acquisitions and the ability to market successfully acquired technologies and products; the inability to adequately protect Company intellectual property and the potential for infringement or breach of license claims of or relating to third party intellectual property; the ability to deliver and stimulate demand for new products and technological innovations on a timely basis; risks related to data and information security vulnerabilities; ineffective management of, and control over, the Company's growth and international operations; fluctuations in exchange rates; and changes in and a dependence on key personnel, as well as other factors contained in our most recent Quarterly Report on Form 10-Q (copies of which may be accessed through the Securities and Exchange Commission's website at <http://www.sec.gov>), including those found therein under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations". In addition to these factors, actual future performance, outcomes, and results may differ materially because of more general factors including (without limitation) general industry and market conditions and growth rates, economic and political conditions, governmental and public policy changes and the impact of natural disasters such as earthquakes and floods. The forward-looking statements included in this press release represent the Company's views as of the date of this press release and these views could change. However, while the Company may elect to update these forward-looking statements at some point in the future, the Company specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this press release.
