

# Red Hat Announces New Teams and Collaboration Enhancement for FeedHenry 3 Mobile Application Platform

NOV 19, 2014

*New features improve security and collaboration for distributed development teams across the application development lifecycle*

RALEIGH, N.C.--(BUSINESS WIRE)-- Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced an update to its [FeedHenry 3](#) mobile application platform. The update, featuring a new Teams and Collaboration enhancement, is an expansion to one of the industry's leading mobile application platforms for enterprise development. The FeedHenry 3 mobile application platform brings something new to the market with its integrated collaboration and access control features that support distributed development teams working in unison across multiple application projects.

The FeedHenry 3 Teams and Collaboration enhancement includes:

**Global collaboration on mobile application projects:** Multiple distributed development teams, both in-house and outsourced, can work simultaneously in FeedHenry 3 on mobile application projects, which consist of a variety of client applications, cloud applications, and services, each with their own individual Git repositories. Developers work individually but with access to relevant project-related components, increasing agility at individual stages in the application development lifecycle.

**Role-based collaboration across the application lifecycle:** Multiple skills and teams, from application design, front-end coding, back-end services development, analytics, administration, and more, can work concurrently across multiple application projects bringing applications to market faster and more efficiently without impacting individual developer agility and productivity.

**Access controls for mobile projects:** Configuration of fine-grained controls at individual levels of each mobile project enables ease and security of access to key project components. This helps lock functionality at different levels within the platform. For example, by setting authorized access controls, sensitive back-end systems credentials can be insulated from third-party or other developer roles, providing greater security and compliance. This fine-grained access control also encourages an API-driven and micro-services development and discovery approach, enabling ease of discovery and reuse of core components and services.

**Company-wide visibility across mobile projects:** Centralizing collaboration and control across multiple skills in multiple mobile projects, across various stages of their lifecycle, enables visibility of all company-wide mobile projects. This promotes a mobile-first approach to enterprise mobility, supporting innovation and reuse.

Supporting Quotes:

*Cathal McGloin, vice president, Mobile Platforms, Red Hat*

"Enterprise mobility has matured beyond a single application, silo approach, toward a team-based, business-centric model, where multiple applications, at various stages of the application development lifecycle, are managed by different teams. Organizations are looking to improve their agility and responsiveness on mobility projects while at the same time having distributed teams and centralized policy management. Teams and Collaboration, as an integrated feature across the FeedHenry 3 platform, addresses this need, enabling a granularity of access control across different development resources, whether in-house or third-party, that promotes agility and reuse of core components."

*Chris Marsh, principal analyst, 451 Research*

"With 40 percent of large enterprises planning to increase their application development outsourcing, collaboration across enterprise IT, lines of business and any external partners that may be involved is crucial. As the complexity of juggling multiple application projects and the pressure of faster development cycles increase, enterprises will look to platform vendors to offer more team-based collaboration features that provide centralized visibility and control of all application development projects across the organization."

#### Forward-Looking Statements

Certain statements contained in this press release may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: risks related to delays or reductions in information technology spending; the effects of industry consolidation; the ability of the Company to compete effectively; the integration of acquisitions and the ability to market successfully acquired technologies and products; uncertainty and adverse results in litigation and related settlements; the inability to adequately protect Company intellectual property and the potential for infringement or breach of license claims of or relating to third party intellectual property; the ability to deliver and stimulate demand for new products and technological innovations on a timely basis; risks related to data and information security vulnerabilities; ineffective management of, and control over, the Company's growth and international operations; fluctuations in exchange rates; and changes in and a dependence on key personnel, as well as other factors contained in our most recent Quarterly Report on Form 10-Q (copies of which may be accessed through the Securities and Exchange Commission's website at <http://www.sec.gov>), including those found therein under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations". In addition to these factors, actual future performance, outcomes, and results may differ materially because of more general factors including (without limitation) general industry and market conditions and growth rates, economic and political conditions, governmental and public policy changes and the impact of natural disasters such as earthquakes and floods. The forward-looking statements included in this press release represent the Company's views as of the date of this press release and these views could change. However, while the Company may elect to update these forward-looking statements at some point in the future, the Company specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this press release.
