

Red Hat Software Collections 2.2 and Red Hat Developer Toolset 4.1 Now Generally Available

JUN 01, 2016

Latest installments of Red Hat's curated developer languages, databases and tools designed to bridge agility and production stability

RALEIGH, N.C.--(BUSINESS WIRE)-- Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced the general availability of Red Hat Software Collections 2.2, Red Hat's newest installment of open source web development tools, dynamic languages, and databases. Delivered on a separate lifecycle from Red Hat Enterprise Linux with a more frequent release cadence, Red Hat Software Collections is designed to bridge developer agility and production stability by helping to accelerate the creation of modern applications that can then be more confidently deployed into production.

Also available today is Red Hat Developer Toolset 4.1, which helps to streamline application development on Red Hat Enterprise Linux by giving developers access to some of the latest, stable open source C and C++ compilers and complementary development and performance profiling tools. Accessible through the Red Hat Developer Program and related subscriptions, Red Hat Developer Toolset enables developers to compile applications once and deploy across multiple versions of Red Hat Enterprise Linux.

Additions to Red Hat Software Collections 2.2 include:

New open source databases such as MariaDB 10.1, MongoDB 3.2, and PostgreSQL 9.5

New open source languages, including Node.js v4.4, Python 3.5, Ruby 2.3, and Rails 4.2, as well as Maven 3.3

Updated collections, highlighted by MongoDB 2.6, Python 2.7, Apache 2.4, and Thermostat 1.4

Red Hat Developer Toolset 4.1 also features new additions, including:

GNU Compiler Collection (GCC) 5.3

GNU Project Debugger (GDB) 7.11

Eclipse 4.5.2

A number of updates to toolchain components and performance tools, like Dyninst (9.1) and SystemTap (2.9)

Applications built with Red Hat Software Collections can be deployed into production with greater confidence, as most software collections and components are supported for three years. In addition to Red Hat Enterprise Linux 6 and 7, applications built with Red Hat Software Collections can also be deployed to Red Hat Enterprise Linux Atomic Host and OpenShift, Red Hat's container application platform, giving more choice and flexibility for application portfolios.

Red Hat Software Collections 2.2 and Red Hat Developer Toolset 4.1 are now available to customers and partners with select active Red Hat Enterprise Linux subscriptions. Additionally, for developers looking to take advantage of Linux containers, many of the most popular Red Hat Software Collections are available as Dockerfiles and Docker-formatted images, with the latter made available via the [Red Hat Customer Portal](#).

Supporting Quote

Jim Totton, vice president and general manager, Platforms Business Unit, Red Hat

"Developers need the latest tools to build modern applications, particularly cloud-native applications, but the business at large requires a commitment to application stability that many of these tools simply do not have. Backed by Red Hat's enterprise-grade support and our robust technology portfolio, the latest installment of Red Hat Software Collections helps developers gain access to the latest stable builds of needed tools while holding true to the requirements of the broader business for stable, supported production applications."

Forward-Looking Statements

Certain statements contained in this press release may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: risks related to the ability of the Company to compete effectively; the ability to deliver and stimulate demand for new products and technological innovations on a timely basis; delays or reductions in information technology spending; the integration of acquisitions and the ability to market successfully acquired technologies and products; the effects of industry consolidation; uncertainty and adverse results in litigation and related settlements; the inability to adequately protect Company intellectual property and the potential for infringement or breach of license claims of or relating to third party intellectual property; risks related to data and information security vulnerabilities; ineffective management of, and control over, the Company's growth and international operations; fluctuations in exchange rates; and changes in and a dependence on key personnel, as well as other factors contained in our most recent Annual Report on Form 10-K (copies of which may be accessed through the Securities and Exchange Commission's website at <http://www.sec.gov>), including those found therein under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations". In addition to these factors, actual future performance, outcomes, and results may differ materially because of more general factors including (without limitation) general industry and market conditions and growth rates, economic and political conditions, governmental and public policy changes and the impact of natural disasters such as earthquakes and floods. The forward-looking statements included in this press release represent the Company's views as of the date of this press release and these views could change. However, while the Company may elect to update these forward-looking statements at some point in the future, the Company specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this press release.
