

# Red Hat Releases Red Hat Developer Toolset 2.0 with Update to GCC

SEP 12, 2013

*Latest stable versions of essential development tools allow developers to compile once, deploy on any Red Hat Enterprise Linux 5 or 6*

RALEIGH, N.C.--(BUSINESS WIRE)-- Red Hat, Inc., (NYSE: RHT), the world's leading provider of open source solutions, today announced the general availability of Red Hat Developer Toolset 2.0. Available to all Red Hat customers with an active Red Hat Enterprise Linux Developer subscription, Red Hat Developer Toolset provides access to the latest stable versions of open source development tools on a separate, accelerated life cycle.

Delivering a parallel set of the latest stable tools to those provided with Red Hat Enterprise Linux, Red Hat Developer Toolset 2.0 introduces new tools to the content set available with Red Hat Developer Toolset 1.0. This includes Eclipse 4.3.0, Dyninst 8.0, and Strace 4.7, as well as the GNU Compiler Collection (GCC) 4.8 update. These additions to version 2.0 allow developers to use some of the latest innovative tools without dedicating cycles to installing and troubleshooting unsupported community versions.

Red Hat Developer Toolset enables C, C++, and Fortran developers to compile once and then deploy across multiple versions of Red Hat Enterprise Linux. There is no need for application re-writes as compatibility is preserved, even when deploying to newer versions of Red Hat Enterprise Linux. Additionally, the capabilities offered with Red Hat Developer Toolset help developers more quickly diagnose and debug applications, and even analyze application performance to isolate memory and management issues.

Red Hat Developer Toolset is available via Red Hat Network for users who develop applications for Red Hat Enterprise Linux 5 and Red Hat Enterprise Linux 6. Please see the Red Hat Developer Toolset release notes for support of specific Red Hat Enterprise Linux releases. Red Hat Developer Toolset is available through the following subscriptions:

Red Hat Enterprise Linux Developer Suite

Red Hat Enterprise Linux Developer Support

Red Hat Enterprise Linux Developer Workstation

Red Hat Enterprise Linux Not-for-resale (NFR) subscriptions for qualifying Partners

Red Hat Enterprise Linux North American Academic Site Subscriptions

Red Hat Developer Toolset 2.0 complements the general availability of Red Hat Software Collections 1.0, which delivers the latest, stable open source dynamic languages and databases to Red Hat Enterprise Linux subscribers on a separate, more frequent release cadence.

## Supporting Quotes

*Jim Totton, vice president and general manager, Platform Business Unit, Red Hat*

"Delivering the application innovation expected by modern end users necessitates the rapid adoption of emerging development tools, a need that often forces developers to risk production stability on untested, potentially unstable community releases. Red Hat mitigates this risk with Red Hat Developer Toolset, delivering the latest stable C and C++ tools to developers, helping them to deliver great Linux applications faster, across multiple versions of Red Hat Enterprise Linux in physical, virtual and cloud environments. Red Hat Developer Toolset complements Red Hat Software Collections - a new offering for those seeking updated dynamic languages or open source databases with the stability and backing of a Red Hat subscription."

## Forward-Looking Statements

Certain statements contained in this press release may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: risks related to delays or reductions in information technology spending; the effects of industry consolidation; the ability of the Company to compete effectively; the integration of acquisitions and the ability to market successfully acquired technologies and products; uncertainty and adverse results in litigation and related settlements; the inability to adequately protect Company intellectual property and the potential for infringement or breach of license claims of or relating to third party intellectual property; the ability to deliver and stimulate demand for new products and technological innovations on a timely basis; risks related to data and information security vulnerabilities; ineffective management of, and control over, the Company's growth and international operations; fluctuations in exchange rates; and changes in and a dependence on key personnel, as well as other factors contained in our most recent Quarterly Report on Form 10-Q (copies of which may be accessed through the Securities and Exchange Commission's website at <http://www.sec.gov>), including those found therein under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations". In addition to these factors, actual future performance, outcomes, and results may differ materially because of more general factors including (without limitation) general industry and market conditions and growth rates, economic and political conditions, governmental and public policy changes and the impact of natural disasters such as earthquakes and floods. The forward-looking statements included in this press release represent the Company's views as of the date of this press release and these views could change. However, while the Company may elect to update these forward-looking statements at some point in the future, the Company specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this press release.
