

# Red Hat Advances OpenShift Enterprise with New Release

JUL 10, 2013

*OpenShift Enterprise 1.2 offers enhanced partner extensibility and improved developer productivity*

RALEIGH, N.C.--(BUSINESS WIRE)-- Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced advancements to its award-winning, private Platform-as-a-Service (PaaS) offering, OpenShift Enterprise. OpenShift Enterprise 1.2 is now available for deployment within on-premise datacenters or in private, public, or hybrid clouds with updated pluggable technology cartridges and other enhancements. The updates to OpenShift Enterprise 1.2 continue Red Hat's commitment to enhance developer productivity and IT service delivery with PaaS offerings that enable developers to design and code applications without losing time on technology integration. With OpenShift Enterprise and the company's recently announced, commercially available public PaaS offering, [OpenShift Online](#), Red Hat is the only enterprise software company with public and private open source PaaS offerings. The strength and value of the OpenShift platform continues to be demonstrated through adoption by [global systems integrators](#), [leading edge start-ups](#), and [large established enterprises](#).

OpenShift Enterprise is a versatile platform for application development, operations, and IT architecture as it provides users with access to a cloud-based application platform built on a trusted stack of open source Red Hat technologies, including Red Hat Enterprise Linux, JBoss Enterprise Application Platform, and OpenShift Origin, the upstream code that powers both OpenShift Enterprise and OpenShift Online. OpenShift Enterprise automates much of the provisioning and systems management of the application platform stack in a way that enables the IT team to more easily meet growing business demands for new application services. OpenShift Enterprise also provides an on-demand, elastic, scalable, and fully configured application development, testing and hosting environment for application developers so that they can focus on coding these new application services. With its unique Security-Enhanced Linux (SELinux) approach to handling secure multitenancy, OpenShift Enterprise also offers reliable security and multi-tenancy with the ability to subdivide the operating system instances for efficiency.

In a recent report titled, "The Benefits and Significance of Private Platform as a Service" sponsored by Red Hat, IDC's group vice president of Application Development and Deployment, Stephen Hendrick noted, "Red Hat's private PaaS does an effective job of mitigating security concerns while allowing enterprises to maintain high application densities and utilization rates and improve developer productivity. These characteristics enable OpenShift Enterprise to provide an optimal combination of security and efficiency at exactly the right time."<sup>1</sup>

OpenShift Enterprise 1.2 includes several new features, including:

A brand new cartridge design and specification to complement the cartridge infrastructure within OpenShift: This new feature enables OpenShift Enterprise customers and partners to make additional technology services available to developers in a self-service fashion. In June, Red Hat announced the [new cartridge specification](#) and collaboration with [OpenShift ecosystem partners](#) to enable tighter integration with complementary partners including 10gen, Codenvy, CorrelSense, EnterpriseDB, Iron.io, MongoLab, New Relic, OC Systems, and Zend. OpenShift Enterprise 1.2 brings the new cartridge specification and these partner capabilities to Red Hat's on-premise private PaaS customers.

In addition to the cartridges, OpenShift Enterprise 1.2 offers the added ability to create Secure Sockets Layer (SSL) subdomains and take advantage of WebSocket for additional networking support, enabling customers and developers to implement cloud solutions that focus on the code and accelerate their applications' time to market.

## Availability

OpenShift Enterprise 1.2 is available immediately in North America, the United Kingdom, Continental Europe, and to select customers in Asia and Latin America, with plans for global availability in the coming months.

## Supporting Quotes

*Ashesh Badani, general manager, Cloud and OpenShift, Red Hat*

"These newest updates to OpenShift Enterprise continue our trend of offering developers and customers freedom and a variety of choice in the cloud. We want to create the best environment for developers to deploy their applications, and the self-service updates to this version of OpenShift Enterprise through the new cartridge design will allow this greater freedom in how users choose to run their applications."

#### Forward-Looking Statements

Certain statements contained in this press release may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: risks related to delays or reductions in information technology spending; the effects of industry consolidation; the ability of the Company to compete effectively; the integration of acquisitions and the ability to market successfully acquired technologies and products; uncertainty and adverse results in litigation and related settlements; the inability to adequately protect Company intellectual property and the potential for infringement or breach of license claims of or relating to third party intellectual property; the ability to deliver and stimulate demand for new products and technological innovations on a timely basis; risks related to data and information security vulnerabilities; ineffective management of, and control over, the Company's growth and international operations; fluctuations in exchange rates; and changes in and a dependence on key personnel, as well as other factors contained in our most recent Quarterly Report on Form 10-Q (copies of which may be accessed through the Securities and Exchange Commission's website at <http://www.sec.gov>), including those found therein under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations". In addition to these factors, actual future performance, outcomes, and results may differ materially because of more general factors including (without limitation) general industry and market conditions and growth rates, economic and political conditions, governmental and public policy changes and the impact of natural disasters such as earthquakes and floods. The forward-looking statements included in this press release represent the Company's views as of the date of this press release and these views could change. However, while the Company may elect to update these forward-looking statements at some point in the future, the Company specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this press release.
