

# Red Hat Simplifies Integration with JBoss Fuse Service Works 6

FEB 04, 2014

*New offering sets the stage for faster and easier cloud, mobile and business process development and integration*

RALEIGH, N.C.--(BUSINESS WIRE)-- Red Hat, Inc. (NYSE: RHT), the world's leading provider of open source solutions, today announced its next-generation service design, development and integration platform, JBoss Fuse Service Works 6, to help enterprises unlock information dispersed in different applications, integrate disparate business processes, and transition to open hybrid cloud architectures.

Today's enterprise IT environments are highly distributed, yet the applications, workflows and business processes—many of which are mission-critical to the function and operation of the business—are highly dependent on one another. JBoss Fuse Service Works provides the integration, orchestration, governance and monitoring required to meet the speed and quality needs of the business. JBoss Fuse Service Works sets the stage for faster and easier cloud, mobile and business process development projects by allowing IT to simplify service-enabling of existing and new applications and data.

JBoss Fuse Service Works 6 represents the next version of Red Hat JBoss SOA Platform and includes enterprise service bus (ESB) capabilities based on Apache Camel, an implementation of many of the most commonly used enterprise integration patterns (EIP). It leads to greater accuracy, agility and quality, across enterprise applications and services. Additionally, JBoss Fuse Service Works 6 provides a foundation for running integration in the cloud, setting the stage for integration Platform-as-a-Service (iPaaS).

JBoss Fuse Service Works includes:

Enterprise Service Bus (ESB) consisting of a modern enterprise integration pattern-based development model through [Apache Camel](#), a high-performance messaging broker through [Apache ActiveMQ](#), and a web services framework through [Apache CXF](#).

Service delivery - Full life cycle support for developing, deploying and managing service-oriented applications is provided by a lightweight service delivery framework, based on Service Component Architecture (SCA), called [SwitchYard](#). SwitchYard supports distributed and cross-functional teams with code and model-driven tooling, and enables developers to focus on the actual business logic by separating the underlying implementation.

Service governance - Life cycle management for services, from design and development through deployment, is based on the [Overlord](#) project, helping to define, expose and enforce rules or policies.

Business transaction monitoring - Overlord also provides the infrastructure to capture service activity information and then provides necessary metrics and alerts to help meet business and service level agreements (SLAs) and optimize the integration solutions.

Supporting Quotes

*Craig Muzilla, senior vice president, Applications Platform Products Group, Red Hat*

"The diverse and interdependent nature of today's business services ecosystems requires more than simple service orchestration - integration, governance and monitoring are crucial for supporting the needs of the business. JBoss Fuse Service Works sets the stage for faster and easier cloud, mobile application and business process development and integration by providing a comprehensive offering that allows IT to simplify service-enabling of existing and new applications and data."

*Erik Wallin, co-founder and chief operating officer, Shadow-Soft*

"We're excited to see Red Hat taking steps to help organizations be more strategic in how they approach integration. Having a high level of visibility and control over the full business service ecosystem - from applications to business processes - can be a great advantage for modern enterprises, and we're excited about Red Hat's approach to delivering this with JBoss Fuse Service Works."

*Carl Lehmann, research manager, 451 Research*

"A new term will become more common in our IT vernacular. 'Business services' are emerging as reusable and configurable components. They can integrate and assemble to form new applications that span on-premise infrastructure and cloud services. But they will require tools such as Red Hat's JBoss Fuse Service Works to simplify integration complexity and make practical open hybrid cloud architecture."

## Forward-Looking Statements

Certain statements contained in this press release may constitute "forward-looking statements" within the meaning of the Private Securities Litigation Reform Act of 1995. Forward-looking statements provide current expectations of future events based on certain assumptions and include any statement that does not directly relate to any historical or current fact. Actual results may differ materially from those indicated by such forward-looking statements as a result of various important factors, including: risks related to delays or reductions in information technology spending; the effects of industry consolidation; the ability of the Company to compete effectively; the integration of acquisitions and the ability to market successfully acquired technologies and products; uncertainty and adverse results in litigation and related settlements; the inability to adequately protect Company intellectual property and the potential for infringement or breach of license claims of or relating to third party intellectual property; the ability to deliver and stimulate demand for new products and technological innovations on a timely basis; risks related to data and information security vulnerabilities; ineffective management of, and control over, the Company's growth and international operations; fluctuations in exchange rates; and changes in and a dependence on key personnel, as well as other factors contained in our most recent Quarterly Report on Form 10-Q (copies of which may be accessed through the Securities and Exchange Commission's website at <http://www.sec.gov>), including those found therein under the captions "Risk Factors" and "Management's Discussion and Analysis of Financial Condition and Results of Operations". In addition to these factors, actual future performance, outcomes, and results may differ materially because of more general factors including (without limitation) general industry and market conditions and growth rates, economic and political conditions, governmental and public policy changes and the impact of natural disasters such as earthquakes and floods. The forward-looking statements included in this press release represent the Company's views as of the date of this press release and these views could change. However, while the Company may elect to update these forward-looking statements at some point in the future, the Company specifically disclaims any obligation to do so. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this press release.
